SYDNEY ULTRASOUND *for* WOMEN

Preferred Model of Care, Prenatal Screening

For General Inquiries call 1300 55 7226

Prior to **10** weeks

Dating Scan

- Confirm viability
- Confirm single or multiple pregnancy
- Exclude ectopic pregnancy
- Determine expected due date (EDD)

1

Item number:
55700 (private billing)

10 weeks

Non-invasive prenatal testing (NIPT)

- Consultation, viability Scan and blood collection same day.
- Blood sample sent to laboratory for cell-free DNA screening of certain chromosome abnormalities, such as Down Syndrome

Result takes less than 2 weeks

2

Item number:
55700 (bulk billed)
104 (bulk billed)
NIPT at cost

Prior to **12** weeks

Blood test for pregnancy risk assessment

- Blood is collected by Genea or SUFW or other agency for placental biochemistry (PAPP-A, PIGF and free beta hCG).

Helps to assess risk for the common chromosome problems and early, severe blood pressure problems (pre-eclampsia).

3

Fee charged by blood collection agency

12 - 14 weeks

Anatomy Scan

- Scan to review fetal growth and structures, nuchal translucency measurement and uterine artery blood flow.

Pre-eclampsia risk assessment using clinical, biochemical and ultrasound factors

4

Item number:
55707 (private billing)

18 - 20 weeks

Morphology Scan

- Scan to assess fetal growth and the more complex structures (such as the brain, heart and kidneys)

Assess cervix length

Assess placental location

5

Item number:
55706 (private billing)

Note: This is our preferred model of care and some steps are variable or optional
